

Carbon Offset Programs

Enterprise and National are committed to helping our customers achieve their business goals. We're working with TerraPass to facilitate an easy solution for customers to offset their carbon footprints and fulfill their corporate sustainability objectives. We've also negotiated a discounted rate for offsets to provide our customers with additional value.

How do carbon offsets work?

Carbon offsets help reduce the remaining carbon emissions generated to help you reach sustainability goals. TerraPass credits support emission reduction projects that reduce, remove, or capture emissions from the atmosphere. These projects provide a measurable impact to the community and your business.

What's a Carbon Offset?

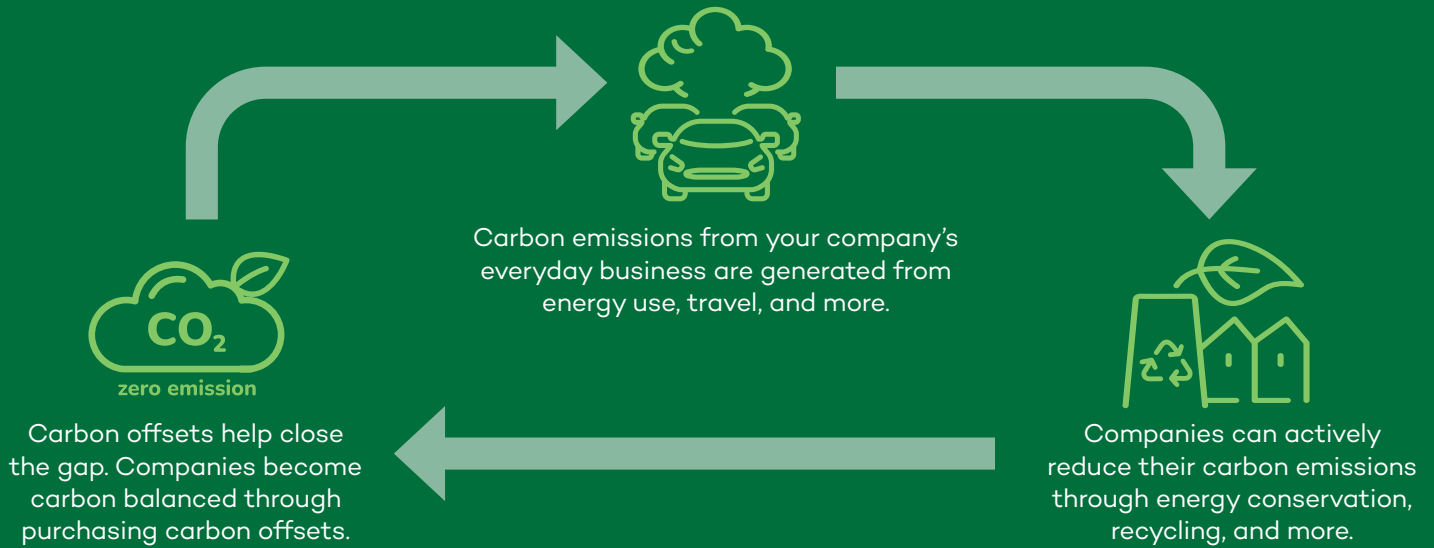

For every ton of emissions a sustainable project reduces, one carbon offset is created. Carbon offsets help fund current and future sustainable projects.

1 metric ton or 2,205 lbs of CO₂e reduced = 1 carbon offset

Powered by  terrapass™

HOW THE PROGRAM WORKS

VERIFIED CARBON OFFSETS SUPPORT EMISSIONS REDUCTION PROJECTS

Projects are developed that reduce, remove, or capture carbon emissions from the atmosphere. These projects can range in technologies such as:

Renewable Energy

Methane Gas Reduction & Destruction

Forestry

Ozone Depleting Substances

All carbon offsets are verified and validated by the industry's top independent verifiers.
